

Megasquirt MTrackIt

Quick Start Guide v1.0

20 APR 2017
Author: Simon Coulter

1. Copy Megasquirt TunerStudio files to the Android Device

1. Create a folder on the Android device named "**Megasquirt**".
2. Copy the TunerStudio project's **CurrentTune.msq** file into the "**Megasquirt**" folder created above.
3. Copy the TunerStudio project's **projectCfg/mainController.ini** file into the "**Megasquirt**" folder created above (just copy the **mainController.ini** file into the "**Megasquirt**" folder, DON'T create the **projectCfg** sub-folder).

2. Install the MTrackIt App on the Android Device

1. Download the App from Google Play.
2. Run the App, grant access to the permissions requested and define the location of the Megasquirt files needed by navigating to the "**Megasquirt**" folder created above.

3. Connect the Megasquirt ECU to the Android Device

This step is optional, you can "play" with the App without a Megasquirt ECU connected.

Connection depends on what ports the Megasquirt ECU and Android Device provide.

If the ECU only has a serial port, an FTDI serial to USB adapter is needed.

If the Android device has a USB 2.0 port, a USB On-The-Go (OTG) adapter is needed.

Bluetooth is not yet supported.

4. Start Using the App
